SUMMARY

Software Developer in the final semester of a Software Development technology degree (UNIMINUTO, graduating December 2026). I build complete web and mobile applications with TypeScript, React, Next.js, Node.js, Prisma and PostgreSQL, using Docker, AWS and Vercel to run and ship them. During my internship at Bioconstructores Asociados SAS, I built the company website with an admin panel and image management on AWS S3. My team won first place at the 2026 Villavicencio Hackathon, and I worked as a C++ programming teaching assistant. I'm looking for my first Software Developer role on a remote team where I can contribute early and keep growing.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, C++, Kotlin, SQL
Frontend: React, Next.js, Astro, HTML, CSS, Tailwind CSS, Framer Motion, GSAP
Backend & APIs: Node.js, Express, NestJS, REST APIs, Next.js API Routes, authentication and role-based access control
Mobile: React Native, Expo, Expo Router, Zustand, Kotlin (Android), Flutter
Databases: PostgreSQL, MongoDB, MySQL, Prisma ORM, Neon
Cloud & DevOps: AWS (S3, Lambda, SAM), Docker, Docker Compose, Vercel, Railway
Tools & practices: Git, GitHub, Postman, Bun

EXPERIENCE

Full Stack Developer Intern — Feb 2026 – May 2026
Bioconstructores Asociados SAS · Villavicencio, Colombia (hybrid)

- Built the company's public website and admin panel with Next.js, React and TypeScript, from the UI down to the data layer.
- Designed the data model with Prisma on PostgreSQL (Neon) so the admin team can update site content without needing a developer.
- Integrated AWS S3 so administrators can upload and manage images directly from the panel.
- Built responsive interfaces with Framer Motion and GSAP animations, with attention to usability and performance.
- Used Git and GitHub for version control throughout the project.

Programming Teaching Assistant (C++) — Sep 2025 – Nov 2025
Corporación Universitaria Minuto de Dios (UNIMINUTO) · Villavicencio, Colombia

- Supported students learning programming fundamentals in C++: control structures, loops, functions and algorithmic thinking.
- Guided students through solving and debugging exercises, explaining technical concepts clearly and step by step.

SELECTED PROJECTS

Comunidad Protegida · demo — 1st place, Villavicencio Hackathon 2026
Next.js · React — team project

- Guidance platform that helps young people dealing with depression find reliable information, support routes and local services.
- Age-based communities with anonymous participation (no email or personal data) and safeguards to protect users.

Fixlat — Team collaboration portal · GitHub — Technical assessment
Next.js · TypeScript · Prisma · PostgreSQL 16 · Docker Compose · AWS Lambda (SAM / CloudFormation)

- Authentication with ADMIN and USER roles, hashed passwords and business rules such as never leaving the system without an active admin.
- Shared drag-and-drop notes board and a metrics dashboard served by an AWS Lambda function, with a direct Prisma fallback.
- One-command local setup: Docker Compose starts PostgreSQL, runs migrations and seeds demo data.

Dra. Camila Henao — Dental clinic website & admin panel · demo — Web
Next.js · TypeScript · Prisma · PostgreSQL · Docker · Tailwind CSS

- Appointment booking through Next.js API Routes, plus an admin panel to manage appointments and patients with Prisma.

DriveDen — Vehicle management mobile app · site Mobile

React Native · Expo · TypeScript · Expo Router · Zustand · AsyncStorage

- Built the entire frontend on top of the backend API: fuel logs, maintenance, reminders, statistics and AI-assisted voice input.

Other projects: Cartinez (citizen reporting app, React Native), Ruta705 (Android app in Kotlin), Corredor Ecológico (web app with Node.js, Express and MySQL). More at github.com/Juandamm01.

EDUCATION

Technology Degree in Software Development — final semester Feb 2024 – Dec 2026 (expected)

Corporación Universitaria Minuto de Dios (UNIMINUTO) · Villavicencio, Colombia

CERTIFICATIONS & COURSES

Cloud Computing Certified Specialist — ITCertificate Aug 2026

Professional Development and Leadership — UBITS · Coursera Aug 2026

Explorer Programmer Level (164 h) — Colombian Ministry of ICT & CUN 2025

Git and GitHub: Version Control for Web Projects — Crehana Apr 2025

LANGUAGES

Spanish: native · English: intermediate (B1), written and spoken communication in technical settings
